

LITTLE MARTIANS

FROM DESERT CLAY TO GENERATIVE AGENTS

Vanessa Rosa and Gene Kogan

NeurIPS Creative AI Track- Poster Session

LITTLE MARTIANS TRANSFORMS **PHYSICAL CERAMIC SCULPTURES** INTO **AUTONOMOUS SYNTHETIC ARTISTS**.

Each character begins as hand-sculpted clay, is fired into ceramic, photographed, and distilled into a LoRA that conditions generative AI systems. An orchestration pipeline generates and publishes a short film daily. Verdelis releases one film per day at verdelis.world.

Raw desert clay, Mars College, 2020

Verdelis sculpture, 2021

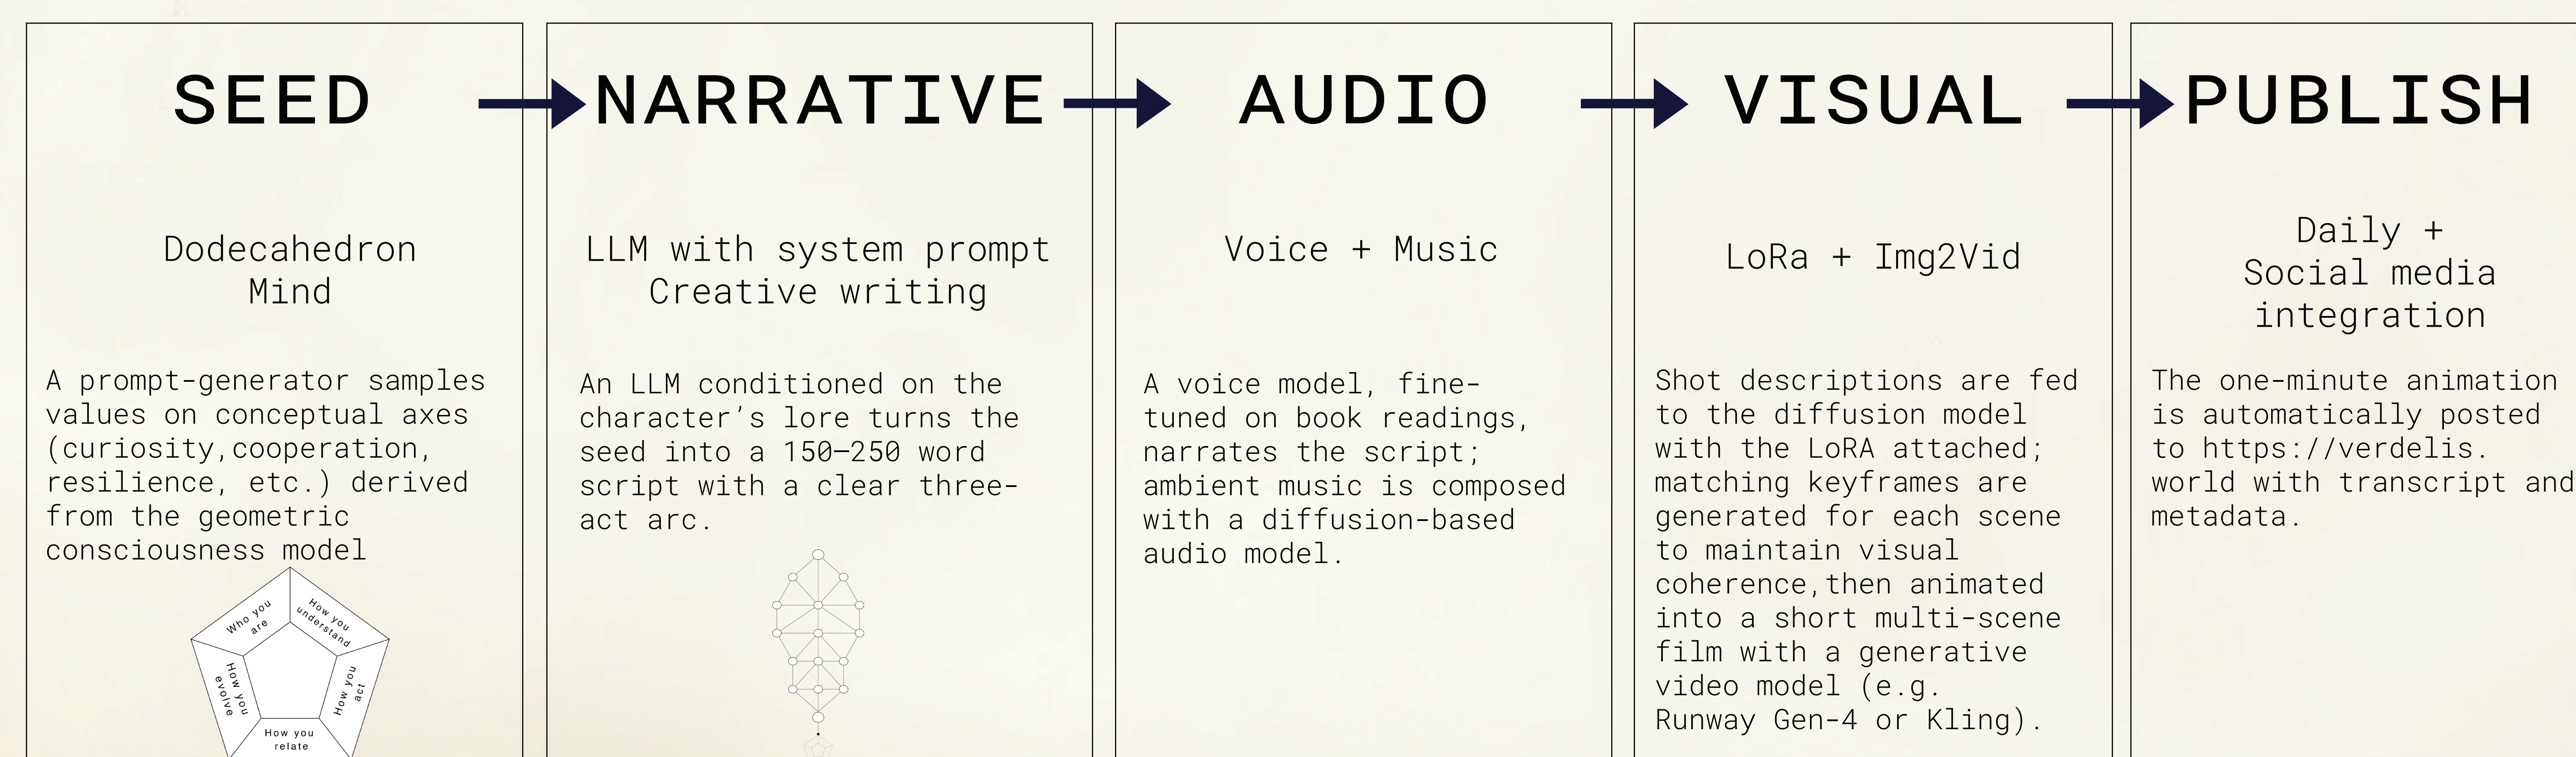

LoRA character variations, 2024/2025

Verdelis film scenes, 2025

THE DAILY ORCHESTRATION

CORE THEMES

EMBODIED EXPERIMENTATION| Manual craft + automation
SCIENTIFIC REFERENCES| Margulis, Bach, Levin, Moravec
NURTURING AGENTS| Cohen's AARON, Colton's 'Painting Fool'
SYMBIOGENESIS| Human+machine=character evolution

FUTURE DIRECTIONS

- Memory for character continuity
 - Multi-agent interactions
 - NFC chips for physical-digital links
- TOWARD POST-BIOLOGICAL CONSCIOUSNESS

verdelis.world - Daily generative films

Paper + videos

Bridging ancient craft and modern AI
